

Flutter package for the UPCitemdb API. For help getting started with Flutter, view the online documentation.

```
import 'package:upc_item_db/upc_item_db.dart';
final UpcItemDb db = new UpcItemDB();
final ItemsResponse data = await db.lookup(barcode, new http.Client());
if (data != null) {
  Item item = data.items[0];
  print(item.title);
}
```

## Objects

- ItemsResponse

```
class ItemsResponse {
  String code;
  int total;
  int offset;
  List<Item> items;
}
```

- Item

```
class Item {
  String ean;
  String title;
  String description;
  String brand;
  String model;
  String color;
  String size;
  String dimension;
  String weight;
}
```
